

Passenger Elasticity Distribution vs Time of Day by Weather Condition

Hourly • primary presentation

Central line = median ϵ ; shaded channel = interquartile range (P25-P75).

View only: y-axis 0-pooled P99 (0.493789); statistics use the full untrimmed valid M10 population.

Groups with $N < 2$ are absent; vertical IQR marks retain isolated supported points.

Missing combinations remain gaps. Weather 21 has no valid observations.
